

**THE EFFECTS OF PHYSICAL AND CHEMICAL WATER
QUALITY PARAMETERS ON WHITE TEA, GREEN TEA,
AND BLACK TEA (*Camellia sinensis*)**

ABSTRACT

After water, tea is the most consumed beverage worldwide. White, green, oolong, and black teas are the most popular types of tea produced. The quality of the water used directly affects the way tea is brewed. Not just for brewing a cup of tea, but also for growing the tea leaves. The water used to make the tea may have a direct effect on the tea's taste, appearance, and aroma. Because water makes up the majority of a brewed cup of tea, good water results in high-quality tea liquor. Water quality and tea leaf quality are both influenced by the same factors. To enhance the flavor of the natural tea, the water must be pure, free of contaminants and minerals, and with enough oxygen. Tea's chemical and sensory characteristics are influenced by water quality. This study focuses on the components of tea brewing related to water quality. The objective of this study was to find out whether the water used to make tea matters to the average tea consumer. Bottled water, tap water, filtered water, well water, distilled water, black tea, white tea, and green tea were prepared. By examining the most significant water quality parameters, such as total hardness, total alkalinity, pH level, electrical conductivity, total solids, and turbidity, the goal of this study is to investigate how physical and chemical water quality factors affect the sensory qualities of each tea liquor. The well water has a mean pH that is lower than SLS standards. The well water has the highest EC and turbidity. Purified water has higher alkalinity, hardness, and TDS than different kinds of water. The ISO standard (9768: 1994 E) was followed for the analysis of the water extract from each tea. Black tea, white tea, and green tea that was prepared with distilled water performed higher on the sensory evaluation than other types of water. As a result, the sensory assessment of tea depends on the quality of the water.

Key words: water quality, black tea, white tea, green tea, water

TABLE OF CONTENT.....	vii
LIST OF FIGURES	x
LIST OF TABLES.....	xi
ABBREVIATIONS	xii
CHAPTER 1 : INTRODUCTION	1
1.1 Background.....	1
1.2 Problem statement.....	3
1.3 Objectives	4
CHAPTER 2 : LITERATURE REVIEW	5
2.1 Water.....	5
2.1.1 Global distribution of water	5
2.1.2 Structure of water molecules	6
2.1.3 Parameters of water quality	7
2.1.4 Water Quality Standard.....	8
2.1.5 Importance of water	8
2.2 Tea	9
2.2.1 Botany of tea.....	9
2.2.2 Tea varieties.....	11
2.2.3 History of tea	11
2.2.4 Sri Lankan context.....	12
2.2.5 Tea growing area in Sri Lanka.....	12
2.2.6 Tea growing conditions.....	13
2.2.7 Tea and water.....	13
2.2.8 Tea consumption.....	14
2.2.9 Types of tea.....	15
2.2.9.1 Black tea	17
2.2.9.2 White tea	21
2.2.9.3 Green tea.....	22
2.2.10 Quality standard for tea.....	24

2.2.10.1	Chemical requirements for black tea (ISO : 3720)	25
2.2.10.2	Chemical Requirements for green tea (ISO : 11287)	26
CHAPTER 3 : MATERIALS AND METHODS		27
3.1	Location and duration	27
3.2	Materials and Equipment	27
3.2.1	Raw materials	27
3.2.2	Equipment	27
3.2.3	Reagents	28
3.3	Water	28
3.3.1	Sample collection	28
3.3.2	Analysis of physical parameters of water sample	29
3.3.2.1	Turbidity	29
3.3.3	Analysis of chemical parameters of water sample	30
3.3.3.1	pH	30
3.3.3.2	Electrical conductivity – EC	31
3.3.3.3	Total hardness	32
3.3.3.4	Total alkalinity	33
3.3.3.5	Total dissolved solids (TDS)	34
3.4	Tea	35
3.4.1	Sample collection	35
3.4.2	Preparation of tea liquor	36
3.4.2.1	For black tea	36
3.4.2.2	For green tea	36
3.4.2.3	For white tea	37
3.4.3	Sensory evaluation	38
3.4.4	Analysis of tea – determination of water extract	39
3.4.4.1	Water extract	39
CHAPTER 4 : RESULTS AND DISCUSSION		41
4.1	pH value, EC and turbidity with water type	41
4.1.1	pH with water type	41
4.1.2	EC with water type	42
4.1.3	Turbidity with water type	43
4.2	Alkalinity, Hardness and TDS with water type	44
